Products › Free Add-Ons › 4D Pop Collection

4D Pop is a series of productivity components grouped into a toolbar that integrates perfectly with the 4D v11 SQL development environment. Filled with clever tools and immediately useful for developers, 4D Pop has many advantages.

NEW! *4D Pop Collection is included in the installer for 4D v12. If you are a 4D v12 user, you need not download 4D Pop.*

A Mind for Productivity

Every 4D Pop component is a handy little nugget you'll wonder how you ever did without. Created by 4D developers for 4D developers, they'll help you save precious time on repetitive operations, be the little helpers you always dreamt of having, and put an even friendlier face on your development environment.

Easy to Use

Installing a new component is easy: Just drag and drop on to the 4D Pop toolbar! Each comes with its own online help.

Modular

You can compose your 4D Pop palette *à la carte* with the tools you prefer, without overloading your screen. And when you're ready to deploy, you can eliminate all the 4D Pop elements from your app to ensure its light weight.

Free

4D Pop and its components are free to use and distribute in all 4D v11 SQL development environments. (From **4D Developer Standard** to **4D Team Developer Professional**)

Source Code Provided

Like all 4D components, 4D Pop tools are miniature 4D databases delivered to you compiled for your immediate use, but also in interpreted mode, so that you can explore the source code. You may wonder how rules are created in 4D Pop Ruler, for example, or how 4D Commands manages predictive typing, or how to manage a palette, a help file or to create a component. It's all there in the code. 4D Pop's code is also a very good example of the art of programming efficiently in 4D… even if we do say so ourselves!

Open

You can enhance 4D Pop with your own components, and you are also able to share them, and find others in the 4D developer **community**.
